

Think For You

“Smart Task Prioritization for Better Time Management”

Bit & Byte

Problem Statement ID – • Team ID –

Theme – • PS Category – Software / Hardware

1. IDEA TITLE

Proposed Solution (Describe your Idea / Solution / Prototype)

Solution

Think For You is a smart task-planning app that lets users enter tasks through **text or voice**, identifies deadlines and estimated duration, and provides **colour-based priority guidance and reminders** to help users manage their time effectively.

Problem Fit

Think For You directly addresses **the problem of missed deadlines and poor task prioritization by helping users organize tasks based on their deadlines and time requirements.**

Innovation

A simple smart planner that combines voice/text task input with deadline, estimated duration, and colour-based priority guidance in one place.

2. TECHNICAL APPROACH

Technologies and methodology for implementation

User Input → Task Analysis → Deadline & Duration Detection → Priority Calculation → Colour-Based Priority → Reminder → Task Management

Technology: HTML • CSS • JavaScript • Web Speech API • Browser Notifications

Technologies to be used

HTML5 – App structure and interface

CSS3 – Design, layout, color and responsiveness

JavaScript – Task processing and priority logic

Web Speech API – Voice-based task input

Browser Notification API – Task reminders

HTML Calendar & Time Input – Deadline and reminder selection

VS Code – Development environment

3. FEASIBILITY AND VIABILITY

Feasibility, challenges and mitigation

Feasibility

Think For You is technically and economically feasible because it uses lightweight web technologies and browser-based features. It can be developed with minimal infrastructure and easily scaled into a complete productivity application.

Challenges

Accurate task and deadline detection
Calculating priority based on time and workload
Handling voice input accurately
Supporting both English and Tamil
Reliable reminders and notifications
Managing different user inputs and mistakes

Strategies

Smart task analysis to identify deadlines and task duration.
Dynamic priority calculation based on urgency and workload. **Voice + text input** for faster and easier task entry. **Bilingual support** for English and Tamil users. **Color-coded priorities** for quick understanding.

4. IMPACT AND BENEFITS

Impact on the target audience and benefits of the solution

Impact

- **Improves time management** by helping users focus on important tasks. **Reduces missed deadlines** through reminders and calendar support. **Makes prioritization easier** with clear color-coded guidance. **Saves time** through voice-based task entry. **Supports wider accessibility** with English and Tamil language options.

Social & Economic

Social Impact

Helps students and individuals manage daily responsibilities. Reduces stress caused by missed deadlines and poor planning. Supports both English and Tamil users.

Economic Impact

Saves time and improves productivity. Can reduce the need for multiple paid productivity tools.

Environmental

- **Reduces paper usage** by replacing physical planners and task notes. **Promotes digital task management**, reducing unnecessary printing. **Supports a paperless and eco-friendly planning approach.**
